

BARRA NEBULIZZATRICE CON IRRIGATORI LEPA

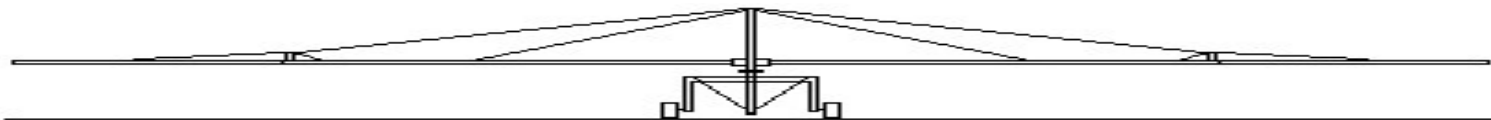

Gli irrigatori LEPA (Low Energy Precision Application) consumano meno energia rispetto agli irrigatori a bassa pressione convenzionali e possono funzionare con portate inferiori. Sono disponibili in due tipologie: la prima deposita l'acqua direttamente nei solchi e la distribuisce in un flusso ristretto che evita di bagnare la coltura; il secondo devia l'acqua in un ampio arco che la distribuisce delicatamente senza spruzzare. Con le teste LEPA, almeno il 20 per cento in più di acqua raggiunge il suolo rispetto agli ugelli di nebulizzazione convenzionali, e sono ideali per colture sia ad alto che basso profilo.

VANTAGGI:

- Prevenire le perdite d'acqua causate dal vento*
- Ridurre al minimo la perdita di acqua in evaporazione*
- Evitare di bagnare la chioma nelle colture a filari*
- Ottenere una copertura della radice più uniforme*
- Aumentare la resa usando meno acqua*
- Ridurre i costi di pompaggio*
- Ideale per colture di alto e basso profilo*
